

iSOA Group announces version 2.5 of DPAdmin™. A Product for Automating IBM DataPower Administration and Deployment

San Francisco, CA (April 12, 2011) – iSOA Group, a Commerce Solutions, Inc. company and IBM Business Partner, announced the launch of version 2.5 of DPAdmin™ the deployment and administration product for IBM DataPower SOA Appliances. DPAdmin™ is an administration product that automates DataPower administration and deployment activities. DPAdmin™ helps clients simplify DataPower implementations by addressing questions expressed by their operational staff: “How can I automate my DataPower deployment while reducing risk and operational costs?” DPAdmin™ can help clients integrate applications more easily, speed up productivity, and drive more value out of their IT assets.

Bryon Kataoka, Chief Technical Officer of iSOA Group shared with us, "Since our initial launch over 1 year ago we have been successful integrating DPAdmin™ with IBM Rational Build Forge, AntHill, XebiaLab's Deployit and ANT. Now we have added significant new features to DPAdmin™ which support improved cluster deployment, firmware versioning and distribution and XB60 support. Our customers appreciate the simple command line interface and the ease of scripting using an XML input file."

Built upon a command-line framework, DPAdmin™ helps choreograph the deployment steps necessary for deploying to DataPower appliances and executes the scripts for simultaneous deployment. DPAdmin™ comes with a Web Console to help the administrator create the execution scripts quickly. It also includes historical audits on executed scripts and command issues. DPAdmin™ is easy to configure, operate and procure.

"iSOA Group represents the type of business partner that brings value to their clients and IBM," said Mark Register, vice president of software business partners, IBM. "DPAdmin™ is just one example of the value iSOA Group and other DataPower Business Partners add to the already significant returns the DataPower appliances provide."

Some of the key benefits to organizations:

- Repeatable, accurate and reliable
- Cluster deployment
- Firmware management
- Reduces resource time and costs
- Complete control of the deployment from the command line

- Total platform independence
- Provides reusable XML scripts across platforms
- Integrates with you automated build tools
- Provides Audit and Compliance reporting
- WSRR Interface

The iSOA Group is also showcasing our new solutions offering , DPPatterns at IBM Impact 2011. While at Impact please visit us at our booth to learn more.

About iSOA Group, a Commerce Solutions, Inc. Company

Commerce Solutions started as an IBM Business Partner in 1997 as a systems integrator specializing in WebSphere Application Server. Over time, they developed skills around IBM WebSphere's extended suite of products including Portal, Process Server, Message Broker and DataPower. Finally, iSOA group was born to lead the charge in the SOA and BPM technologies. As IBM's key DataPower Business Partner on the West Coast and with one of the highest number of DataPower certifications across all IBM business partners, iSOA Group was especially well suited to build out the DPAdmin™ Administration product. Their experience developing applications and deploying on the IBM WebSphere product suite gives them a wealth of knowledge to draw from.
