

## Health Provider Network Portal

### The Project:

Development of a Provider Network Portal using WebSphere Portal to provide lookups of associated Medical Provider Web services.

### Client:

Healthcare Provider

### Solution:

Our team, consisting of an architect and a J2EE developer, teamed with the less experienced employee-base to ensure project/product success and technology transfer.

- Installed and configured Portal environment
- Developed Web Services interfaces
- Developed LDAP security administration
- Incorporated Portal Themes & Skins
- Coded Portlets with MVC framework and Portlet messaging

### Features of the site include:

- Patient Demographics
- Provider and Patient search

### Technologies:

WebSphere Application Server, Application Developer, WebSphere Portal, SQLServer, SOAP, WSDL
